Generative AI (GPT) Market Review

Companies, Products, Technology, Real-Time Daily Updates, \$15/mo. - [HERE](#)

Introducing the [Generative AI Market Review](#). This interactive online service tracks the daily activity of 22 organizations in 5 countries. As this is the new market, competition is quite less at this time. The real-time information identifies developments in driving technology and new opportunities as they become available.

The Review identifies pioneering companies, organizations, and research labs developing automated artificial intelligence technology and services. They represent the essential artificial intelligence market worldwide.

The well-organized online information includes company descriptions, markets, analytics, news, blogs, research, executives' bios, job listings, and more. Here is a simple user guide to the interactive online information for our valuable customers: <https://youtu.be/u8qAMpasqIY>

The Generative AI Market Review is available online at \$15 per month or \$120 per year. For more information see Transportation Autonomy at <https://www.computerreview.com/>

About Generative Pre-trained Transformers (GPT)

ChatGPT is a chatbot technology powered by natural language processing (NLP) and deep learning algorithms. It is designed to enable people to interact with machines through natural language conversations. ChatGPT can be used for a variety of purposes, such as customer service, educational support, business automation, and many more as users gain experience. It can offer personalized and contextualized conversations in a variety of applications,

such as e-commerce, customer service, education, and technology. In education, ChatGPT can be used to provide answers to FAQs, suggest study materials, and provide personalized guidance. In business, it can be used to automate customer service and sales processes. In technology, it can be used to help answer technical support questions and provide product recommendations.

How to start using ChatGPT, a Full tutorial

Firstly, you have to create an account on [OpenAI](#), select the sign up option using an email address, create a password, and complete the two-step verification process. You will be notified by email that you're signed up with.

Go to your inbox now and select the verification for email address button, it will activate the account to log directly into the open AI systems. The open AI dashboard isn't Chat GPT, but a separate dashboard to select your desired mode, go to ChatGPT and [chat.openai.com](#).

Here, you need to log in, fill out a few details, and you will receive a code on your Whatsapp to freely use ChatGPT and its systems. It is currently free but the tremendous response is causing a backlog to sign-up.

Some Major Concerns regarding ChatGPT's use. Your conversation with ChatGPT will continue to improve as it learns about you through external feedback. Various safeguards are in place for your enjoyment, but be aware of misleading, offensive, or biased content in the early stages, as the system is improving.

Do not divulge sensitive information and private passwords. There is also a collection of data, as the text and prompts you are entering are reviewed to improve the systems. Be aware of your conversation with the system and don't use sensitive information, such as financial accounts and your passwords.

Discord Network for AI users. You can join the Discord network of over half a million members to share your feedback. Go through the prompts and make sure to read everything and complete the survey to prevent spamming and operational problems.

How to use ChatGPT

It is very simple. All you have to do is key in a message or a query or a prompt of whatever you want, and the AI ChatGPT will answer you by typing the output on the screen. Initially, if you are using it for the first time, there will be few buttons asking questions like "Explain what Quantum Computing is" or "How to make a HTTP request in JavaScript". You can choose any of these or can make a query of your own like "What is 10 plus 9?"

Then, just select enter or set the button here and click on it.

Capabilities of ChatGPT

1. Answers to every type of question. This system will provide answers to all your queries whether they are science-related or business relevant. You can use it for research purposes, for finding new business ideas, and for improving your general knowledge. But some of the answers might not be up to date as this system contains information collected up to 2021.

So, you shouldn't be completely relying on the system as the information might not be current.²

2. The ChatGPT system remembers what you said in previous conversations. Be aware that if you strike up a new conversation thread, the previous one won't be remembered, just the current one that you're in. It also allows you to do follow-ups and corrections.
3. Not satisfied with the answer? Re-prompt.' If you don't get the answer that you're looking for, you can always ask for another one or really just re-prompt for a different option.
4. No inappropriate requests shall be entertained. The AI is also trained to decline providing negative or inappropriate requests, so if you're asking for something malicious most times out of 10, it will not provide that. However, there are odd times where it might accidentally do this.

Limitations of ChatGPT

Some of the problems that you might encounter when using ChatGPT are:

1. Inaccuracy of some data provided. Some of the generations might actually be inaccurate. It is only trained until the last couple of years of information so it's not able to say access the internet right now. Currently, it is in an offline state as of a year or two ago.
2. Not a Pro-Calculator. It also doesn't do mathematics very well. So, it might have some issues, if you're doing things like 10 plus 9 and it might not provide you the correct answer.
3. Biased Content. There's also some bias to the content that is produced based on what you've produced earlier in the conversation, and this could essentially mean that it occasionally produces some harmful instructions and those have to just be ignored.
4. Limited knowledge. As mentioned earlier, the actual AI is trained for events just towards 2021 and it won't have up-to-date information of relevant and current facts that are happening in the world.

Important FAQs regarding ChatGPT

How ChatGPT can help people in daily life?

ChatGPT can help people in various ways in their daily lives:

1. **Personal Assistance:** It can answer questions, provide information and assist with simple tasks like setting reminders, converting units, etc.
2. **Creative Writing:** It can generate creative writing prompts, ideas, and text snippets to help writers, bloggers, and content creators.
3. **Entertainment:** ChatGPT can generate jokes, trivia, and engage in casual conversations for entertainment purposes.
4. **Customer Service:** It can be integrated into websites, apps, and other platforms to provide instant customer service and support.
5. **Education:** ChatGPT can provide educational information and answer questions on a wide range of topics.

6. **Accessibility:** It can assist people with disabilities or language barriers to access information and communicate effectively.

In summary, ChatGPT can make life easier and more convenient by providing quick and accurate information, assistance and entertainment on demand.

Google and ChatGPT similarity

ChatGPT and Google search are similar in the sense that both provide access to information and knowledge. However, there are some key differences between the two:

1. **Functionality:** Google is a search engine that provides relevant web pages and information based on a user's query. ChatGPT, on the other hand, is an AI language model that generates human-like text responses to a given prompt.
2. **Input:** Google requires users to enter a search query to retrieve information, while ChatGPT can generate responses based on a prompt in natural language.
3. **Output:** Google provides a list of web pages and links to relevant information, while ChatGPT generates text in response to a prompt.

In summary, while both provide access to information and knowledge, they do so in different ways and with different outputs. Google is a search engine, while ChatGPT is an AI language mode which, if updated regularly, can mimic a search engine.

How ChatGPT can help in business or lead generation?

ChatGPT can help businesses in several ways in the areas of lead generation and customer support:

1. **Lead Generation:** ChatGPT can be integrated into websites, apps, and other platforms to interact with potential customers and gather information about their needs and interests. This information can then be used to generate leads and target marketing efforts.
2. **Customer Service:** ChatGPT can provide instant customer service and support, answering common questions, providing information and assisting with simple tasks. This can reduce the workload of human customer service representatives and provide 24/7 assistance to customers.
3. **Sales Assistance:** ChatGPT can assist sales teams by providing product information, answering questions, and engaging with potential customers to generate leads and close deals.
4. **Market Research:** ChatGPT can be used to gather information and insights from customers and potential customers, which can inform product development and marketing strategies.

In summary, ChatGPT can improve business processes and increase efficiency by automating routine tasks, providing instant support and assistance, and generating leads through customer interactions.

About Computer Review, the Publisher.

Computer Review tracks Technology Markets worldwide. The real-time Reviews represent five decades of database automation experience. Our ActiveTrak system gathers first-hand information from thousands of companies and universities in 150 countries. The real-time activity is summarized by the company and technology, for quick access to actionable material. The daily Reviews save time and effort by providing important information about the New Economy.

Business analysts, advertisers, market specialists, teachers, and students use real-time information to learn about new technology solutions. Data science robots help you identify the companies, leaders, and markets driving innovation. We specialize in tracking companies for you, this short video shows how: <https://youtu.be/u8qAMpasqIY>
