Small Modular Reactors Are Booming: See Every Company Behind Them in One Directory

Who Is Building the Next Generation of Nuclear Power? One Global Directory Has the Answer

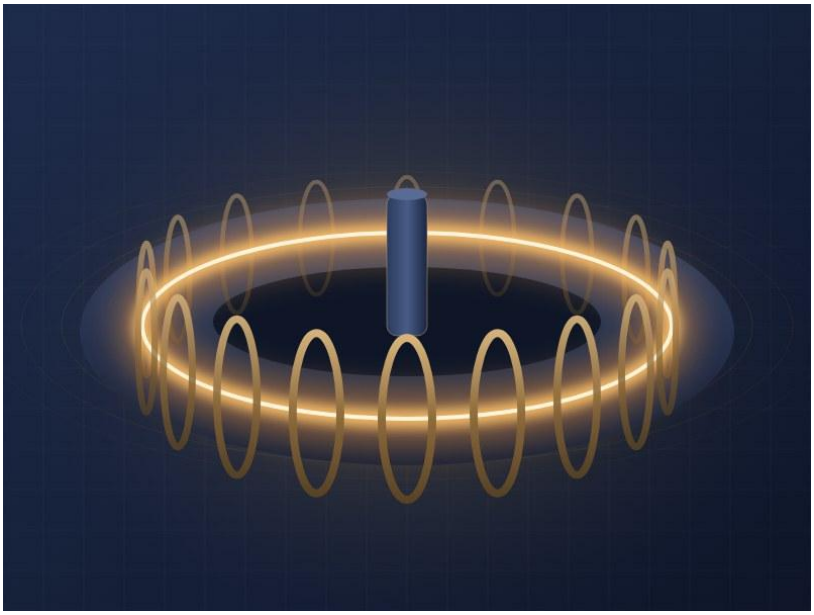

Gloucester MA, US – November 18, 2026

Computer Review's Atomic Fusion Reactors directory brings company profiles, executive teams, press releases, country markets and job data into one place, with a free tech chart to get you started.

Get the Atomic Fusion Reactors Directory Here

Nuclear power is moving fast in the United States. Utilities, data center operators, defense planners and investors are all looking at small modular and portable reactors. The hard part is knowing who the players are, who leads them and where they are headed. That information is scattered across hundreds of websites, and most teams don't have the hours to collect it.

Computer Review has done that work. Its global Atomic Fusion Reactors directory lists the companies working in this sector worldwide and organizes the key facts in one place.

Why the Sector Is in the Spotlight

US power demand is climbing as data centers, AI computing and domestic manufacturing need steady, round-the-clock electricity. At the same time, reactor designs are shrinking. Small modular reactors are built in factories, and portable and micro reactors target remote sites, industrial users and military bases. Fusion startups keep drawing investor and government interest as well.

The Problem: Scattered Information

The sector is fragmented, new startups appear often, and any list can go out of date quickly. Leadership is on one page, announcements on another and job openings on a third. Researching this by hand takes hours and still leaves gaps, and slow research means missed deals, missed hires and lost ground to competitors.

The Solution: One Directory, the Whole Sector

The directory gives you a bird's-eye view of the global industry. It covers:

- **Sector synopsis:** an overview of the industry
- **Press releases:** company announcements in one place
- **Executive teams:** the leaders behind each company
- **Country markets:** how the sector looks across nations
- **Employment and jobs:** hiring activity and openings

It is automated, global and includes a free tech chart.

Where the Industry Is Heading

Over the next three to five years, expect more projects to move from announcement to construction, with growing attention on factory-built designs that promise shorter timelines. Digital tools will play a bigger role in design, monitoring and maintenance. Energy security and sustainability will keep shaping policy and investment.

The workforce will keep growing as new plants and suppliers need skilled people, and fusion research will keep drawing funding and public interest even as commercial use remains further out.

In a sector changing this quickly, current information is a competitive advantage. The earlier you have it, the more you can do with it.

Who Gets the Most Value From This Directory

Job seekers: See which companies are growing, where jobs are opening and who leads each team. It is a ready-made target list for anyone building a career in nuclear energy.

Libraries and research institutions: Offer students and researchers a dependable global reference without piecing it together from scattered sources.

Competitors and strategy teams: Run competitor analysis in a fraction of the time. See who is active, who runs them, what they are announcing and which countries they are targeting.

Sales, business development and marketing teams: Find relevant companies and decision-makers, understand the landscape and spot regional opportunities before the competition does.

Final Word

Nuclear energy is entering a new chapter, and the companies shaping it are spread across the globe. The professionals who see the whole field clearly make better decisions, whether they are hiring, competing, studying or investing. Computer Review's Atomic Fusion Reactors directory gives you that clear view, so you can spend less time searching and more time acting.
