

## Computer Review's Communication Technology eBook

### Computer Review Launches Definitive 'Communication Technology' Directory, Profiling 6,564 Companies

FOR IMMEDIATE RELEASE

US Gloucester MA, November 3, 2025

[Computer Review](#), a leading provider of professional market intelligence, today announced the official launch of its definitive "[Communication Technology](#)" eBook Directory. This expansive digital resource is a vital addition to the knowledge economy, offering unprecedented, in-depth access to over 6,564 companies operating in the pivotal Communication and Wireless sector across 120 different countries. This professional-grade resource is available to subscribers for the exceptionally minimal cost of \$15.00 per month or a discounted yearly rate of \$120.00, democratizing access to critical global market data.

This new offering is not merely a list; it is a meticulously curated database designed to be the go-to platform for market analysts, investors, technology developers, corporate strategists, and supply chain managers who require real-time, consolidated intelligence on the rapidly evolving global Communication and Wireless landscape. With the daily infusion of updated information collected by proprietary monitoring systems, the directory transforms the arduous process of international market surveillance into a seamless, minute-by-minute capability.

## Unmatched Global Scope: The 120-Country Advantage

The sheer geographical breadth of the "[Communication Technology](#)" directory sets a new industry standard. By systematically tracking the activities of over 6,564 firms across 120 countries—from established technology powerhouses in North America and Western Europe to burgeoning innovation hubs in Southeast Asia, Latin America, and Africa—Computer Review offers a panoramic view previously unattainable without significant internal investment. This extensive coverage provides a crucial competitive edge in an industry where global partnerships, international supply chains, and emerging market adoption dictate growth trajectories.

The modern Communication Technology sector is fundamentally global, driven by ubiquitous standards like 5G and the accelerating deployment of the Internet of Things (IoT). To understand this market is to understand its global spread. Our directory's focus on 120 countries goes far beyond the typical, narrowly focused industry reports. It ensures that critical signals—whether a cutting-edge startup in Brazil, a significant regulatory shift in India, or a new satellite communication venture in South Korea—are captured and presented in a unified, highly navigable structure.

The [Communication and Wireless](#) sector encompasses a vast array of sub-domains, including fixed-line telecommunications, mobile infrastructure, satellite communications, network equipment manufacturing, software-defined networking (SDN), and the core technologies underpinning 5G, 6G, and beyond. This directory's scope is tailored to reflect this diversity, providing subscribers with detailed company profiles, including executive teams, recent press releases, and employment trends, allowing for robust due diligence and strategic competitive analysis.

## Professional Insight and Data Freshness, Delivered Daily

In the technology market, yesterday's news is often too late. Recognizing this imperative for real-time information, the "[Communication Technology](#)" EBook Directory is committed to daily updates. This freshness is powered by Computer Review's proprietary **ActiveTrak bots**, advanced software agents specifically engineered to monitor original, authoritative sources for every company listed in the database.

These ActiveTrak bots continuously scan the digital presence of the more than 6,500 companies, filtering the noise to deliver relevant, professional information. The data collection methodology prioritizes efficiency and accuracy, ensuring that subscribers are informed of relevant developments as they happen. The latest update, noted as October 31, 2025, underscores the directory's commitment to providing data that is current and actionable.

The platform is designed to allow users to **"monitor the market in minutes."** Instead of spending hours aggregating fragmented data from dozens of disparate sources, subscribers can utilize the directory's keyword search functionality and country market breakdowns to rapidly isolate specific companies, technological trends, or geographic activity. This efficient access is paramount for decision-makers who need to swiftly benchmark competition, identify potential acquisition targets, or validate technological partnerships.

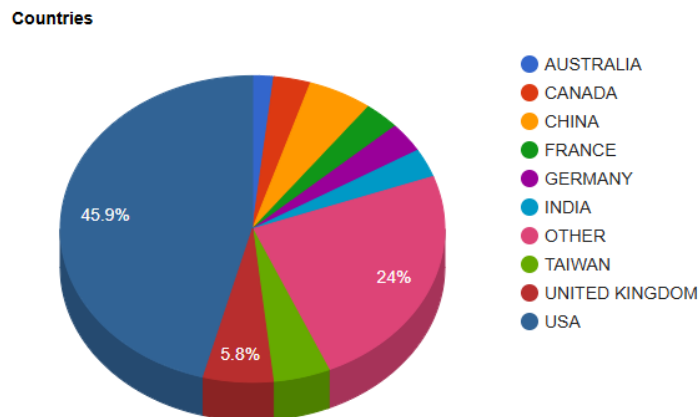

## Visualizing the Global Footprint

To further enhance user understanding and analytical capabilities, the directory integrates professional data visualizations. While the sheer volume of data is impressive, its organized presentation is what provides true value.

A key analytical component of the directory is a dedicated section providing a geographical breakdown of the monitored companies. This visually intuitive system helps users immediately grasp the distribution of market activity. For example, a featured pie chart within the subscription platform illustrates the precise

percentage breakdown of the 6,564 companies by geographical region, showcasing where the centers of gravity—and future opportunities—lie in the global Communication Technology market. This is an essential feature for strategic planning, revealing market saturation, white space opportunities, and geopolitical risk factors at a glance.

Take a look at our free tech chart showing the distribution of companies in this sector:

## Accessible Pricing for Essential Intelligence

[Computer Review](#) has built its reputation on publishing affordable, high-quality databases. This philosophy is embodied in the pricing of the new "[Communication Technology](#)" eBook Directory. Recognizing that market intelligence should be an enabler, not a barrier, the company has set the subscription rate at a minimal \$15.00 per month. For committed professionals, a significant discount is offered through the yearly subscription of \$120.00, effectively reducing the monthly cost to just \$10.00.

This structure is intentional, ensuring that even individual analysts, small consulting firms, or university researchers can access the same high-level data used by large multinational corporations. The value proposition is unmatched: daily updated, professionally curated data on 6,564+ global companies for less than the cost of a daily coffee.

The ease of access mirrors the affordability. Full content and daily updates are immediately unlocked upon subscription. This digital-first approach means there are no physical copies to wait for; the essential digital technology database is instantly available online, optimized for rapid access and exploration.

## An Essential Tool for the Modern Knowledge Economy

The launch of the "[Communication Technology](#)" eBook Directory serves as a powerful reminder that informed decision-making relies on organized, verified data. The information service is designed specifically for users who must remain current and competitive within their specific sectors of the knowledge economy.

Whether a subscriber is:

- **An investment firm** performing due diligence on a public or private company.
- **A product manager** tracking competitor feature releases and executive appointments.
- **A government official** is monitoring national supply chain security.
- **A researcher** identifying collaborators for next-generation wireless standards.

The directory provides the validated, centralized facts needed to proceed with confidence. Computer Review utilizes its long experience in publishing these affordable databases to select and organize information with care, ensuring that only the most relevant developments inform the subscriber.

Subscribers can immediately access the comprehensive profiles and search functionality upon logging in, enabling them to effortlessly explore the many possibilities and monitor the market with unparalleled efficiency. The "[Communication Technology](#)" eBook Directory is now available and positioned to become the essential resource for anyone serious about the global Communication and Wireless sector.
